

## SUBJECT INDEX

### A

Acid cupola slags and some relationships with melting conditions	527-539
Acid electric furnace roof, Advantages of insulating an	593-594
Agar gels in plaster-bonded investment	347-351
Air furnace bottom temperature, Correlation of, to refractory and operating practice in a cupola-air furnace duplex system	479-489
Air furnace, Construction and operation of coal-fired	634-639
Air furnace design and operation	516-522
Air pollution and public relations	662-663
Air pollution control equipment for melting operations	467-478
Air-set strength and dry properties vs squeeze pressure	496
Albany sand, Geology of	435
Aluminum alloy molding sand	432
Aluminum alloys, Centrifugal casting of	744-762
Aluminum-4% copper alloys, Effect of casting "fiber" on mechanical properties of	664-673
Annealing of malleable iron	107-130
Annealing gray iron for:	
machinability	5, 651-653
stress relief	5
Annealing of malleable iron, Influence of furnace atmosphere on	291-301
As-cast stress, Magnitude of initial	648
Aspiration of air in straight sprues	91
Atmosphere, Influence of furnace, on the annealing of malleable iron	291-301
Atmosphere, melting furnace, Effects of, on casting properties and annealability of malleable iron	107-130
Atmospheric pollution:	
codes	467
defined	467
Austenite formation, Mode of	428

### B

Baking oil-bonded cores, Induced flow process of	279-290
Ballling up of molding sand	433
Base sand, Effect of, in shell molding	21
Basic cupola:	
melting	52-60
operation, Phosphorus removal in	546-551
water-cooled	58, 59
Basic-lined cupolas	4
Bentonite and fireclay, Use of, in molding	436
Binders and mold materials, Effect of, on macro-gas porosity in 85-5-5 bronze	330
Binders, Control tests for shell molding	368
Blast furnace linings	640
Bleed tests, Opinions on	604
Brinell hardness test	659
Brittle fracture, Metallurgical aspects of	246
Brittle fracture of cast and rolled steels	243-262
Bronze:	
A study of segregation in, using a radioactive technique	352-354
Spherical type macro-gas porosity in 85-5-5	327-346
Bulge tests	250

### C

Camber in large castings	41-42
Carbon as a refractory	640-642
Carbon equivalent and chill test depth of gray cast irons	387-393
Cast iron:	
Ductile, Prediction of mechanical properties from chemical composition for fully-annealed	510-515

Cast iron (Cont.):	
Flame hardening of	657-661
Heat treatment of	643-661
Metallurgy	3, 658
Stress relief heat treatment of	646-650
Casting design	38
Cement, Use of, in molding	436
Centrifugal casting:	
aluminum alloys	744-762
defined	702
Engineering aspects of	701-718
non-ferrous metals	711
range of solidification	754
True	702
Centrifuged castings	716
Centrifuging defined	702
Charcoal, Use of, in molding	436
Chemistry of core drying	280
Chill size, Effect of	616
Chill test depth and carbon equivalent of gray cast irons	387-393
Chills, Effect of	688
Chills, Use of, to increase feeding distances	74-76
Chvorinov's rule of heat transfer	686
Clay balls, How to reduce	434
Coal, Fineness of	519
Coal, Volatile matter in	519
Coal-fired air furnaces, Construction and operation of	634-639
Codes, Atmospheric pollution	467
Coke size, Effect of	537
Coke, Types of, for 24-in. cupola	531
Cold melt iron	126
Combination system, Sand reclamation with	222-227
Combustion control in air furnace	638
Contour patching of cupola	380
Control tests for shell molding binders	368
Controlling costs, Use of standards in	457-466
Conveyor molding standards	263-271
Copper-base alloy molding sands	432
Core:	
Bonding principles of oil and water in a green classification	279
department costs	357
department, Layout of mechanized	525
drying, Chemistry of	36
drying, Thermodynamics in	280
finishing, Standard data tables for mixtures	355-366
mixtures	150
Cores:	
Baked and hot properties of	151
Induced flow process of baking oil-bonded in shell molding	279-290
Sand, for semi-permanent mold work	15-16
Veining tendencies of	505
Veining tendencies of	150-155
Cost control for indirect operators, Wage incentive for	561-569
Cost system, A simplified, for small jobbing foundries	600-602
Costs, Are you, reliable?	523-526
Costs, Use of standards in controlling	457-466
"C" process	7-28
Crack propagation tests	253
Crankcase sealer as a pattern coating	580
Croning, Johannes and the "C" process	7
Crystallographic orientation	671
Cupola:	
Acid, slags	527-539
applications of carbon as a refractory	640
dust collecting systems	731-732
fume collection equipment	469-473
lining, Gun placed silica	378-386
operation, Basic, Phosphorus removal in	546-551

Cupola (Cont.):	
slag control	527
Cupola-air furnace duplex system	479-489
Curing time, Effect of, in shell molding	20
Cylinders, Solidification of	142-149

## D

Definitions:	
Atmospheric pollution	467
Centrifugal casting	702
Centrifuging	702
Fluidity	399
Indirect work	561
Pyrometric cone equivalent, P. C. E.	733
Reclaimed sand	196
Reconditioned sand	196
Semi-centrifugal casting	702
Sound	699
Work units	562
Deformation of green molding sand	159-165
Deformation test	159
Degassifiers and deoxidizers, Effect of, on macro-gas	
porosity in 85-5-5 bronze	337
Denseners, Use of, in gray iron practice	46, 47
Density of centrifugal castings	760
Design considerations for permanent mold castings	506
Design of castings	38
Design of patterns	38, 39
Desulfurization of gray iron in basic cupola operation	52
Dimensional tolerance in shell molding	14
Direct labor costs	458
Dry reclamation of molding sand for steel castings	200-205
Dry mulling plus aeration of sand	193
Drying of molds	46, 47
Ductile cast iron:	
Hardening characteristics of induction heated	422-431
Prediction of mechanical properties from chemical	
composition for fully-annealed	510-515
Duplex iron	126
Duplexing furnace, Layout of a	480
Dust collecting systems, Trends in cupola	731-732
Dust control trends	394-398

## E

Educational program for foundries	5
Efficiency, Noise effects on work and	695
Electric furnace roof, Advantages of insulating an acid	593-594
Electric furnaces, Refractories for indirect-arc, for non-	
ferrous melting	733-743
Endothermic and exothermic oxidation	111
Epoxy resins used in shell molding	8, 9
Equipment for shell molding	9
Eutectic modification, Effects of magnesium on, and	
graphitization of certain Fe-C alloys	674-677
Evaluation of resins for shell molding	8
Exothermic and endothermic oxidation	111
Expansion test data on sand mixtures	96

## F

Feed metal flow, Characteristics of	68
Feeding of gray iron	44
Feeding range and riser adequacy	61-80
Feeding range of joined sections	76-79, 302-308
"Fiber," Effect of casting, on mechanical properties of	
aluminum-4% copper alloys	664-673
Fineness of coal	519
Finger-gate systems	446, 447
Finish, Casting surface, Effect of sand flowability on	574-579
Finishing department costs	525
Flame hardening of cast iron	657-661
Flow, metal, in gating system, Velocities and volume	
rates of	439-450
Flowability of sand	156-158
Flowability, sand, Effect of, on casting surface finish	574-579
Flowability test	157
Fluidity:	
defined	399
of malleable iron and furnace atmosphere	113

Fluidity (Cont.):	
Slag	534
test pieces	400-404
testing of molten metals	399-410
Foundry characteristics of magnesium alloy ZK61	726
Foundry Industry, Outstanding opportunities for the	1-6
Foundry noise and its control	694-700
Fracture, Brittle:	
at high temperature	255
Mechanical aspect of	244
Metallurgical aspects of	246
of cast and rolled steels	243-262
Fracture types	244, 669
Freezing mechanism, Factors influencing	610
French molding sand	435
Fundamental concepts of sand reclamation	192
Furnace, Air, design and operation	516-522
Furnace atmosphere:	
and fluidity of malleable iron	113
and mottling tendency in malleable iron	112
Influence of, on annealing of malleable iron	291-301
melting, Effects of, on casting properties and annealability of malleable iron	107-130
Furnace gases, Typical data on	470
Furnace, Refractories for indirect-arc electric, for non-ferrous melting	733-743
Furnace roof, Advantages of insulating an acid electric	593-594

## G

Gases, Typical data on furnace	470
Gating:	
and feeding centrifuged castings	745
and heading for shell molding	12-14
of gray iron castings	42, 43
Principles of ratio	623-627
systems, Velocities and volume rates of metal flow in	439-450
to control pouring rate	416-421
vertical	81-95
German process of centrifugal casting	705
Glossary of sound terminology	699
Gradient conditions required for feeding to soundness	72
Grain size of centrifugal castings	756
Graphite formation characteristics	643
Graphite formation, Slow cooling effect on	644
Graphitic nickel alloy castings, Properties of	552-560
Graphitization, Effects of magnesium on eutectic modification and, of certain Fe-C alloys	674-677
Graphitization in the malleable iron industry	228-242
Gray iron:	
Annealing for machinability	5, 651-653
Elements in	132
feeding	44
Gating of	42, 43
Hardening, with minimum distortion	654-656
Heat treatment of	643-661
Low-sulphur	3
Martempering	5
pouring rate	43
practice, Effect of head pressure in	45
practice, Gases in	132-135
Relation of chill test depth and carbon equivalent	
of	387-393
Rising of	131-141
Stress relief heat treatment for	5, 646-650
Use of denseners in	46, 47
Green hardness vs ramming pressure in molding	490
Green molding sand, Deformation of	159-165
Green properties of reclaimed sand	215
Green properties vs squeeze pressure in molding	493
Gun placed silica cupola lining	378-386
Gun tubes, Manufacture of	703

## H

Hardening characteristics of induction heated ductile iron	422-431
Hardening, Flame, of cast iron	657-661
Hardening gray cast iron with minimum distortion	654-656
Hardness testing	659
Head pressure, in gray iron practice	45

Heat flow in sand . . . . .	456	Manganese in malleable iron . . . . .	111																																																																																																
Heat transfer . . . . .	603-622	Martempering gray iron . . . . .	5																																																																																																
Heat treatment of gray cast iron . . . . .	5, 643-661	Mechanics of shell molding process . . . . .	9																																																																																																
Heat treatment of ZK61 magnesium alloy . . . . .	721	Mechanization in shell molding . . . . .	16-17																																																																																																
Hexamethylenetetramine resin used in shell molding . . . . .	8	Mechanization, Mechanics of foundry . . . . .	272-278																																																																																																
Hot compressive strength of sand mixtures . . . . .	98-101	Mechanized core department, Layout of . . . . .	36																																																																																																
Hot cure test for sand-resin mixtures . . . . .	184	Melamine-formaldehyde resin used in shell molding . . . . .	8, 9																																																																																																
Hot deformation vs squeeze pressure in molding . . . . .	497	Melamine-urea-formaldehyde resins used in shell molding . . . . .	8																																																																																																
Hot rigidity test for sand-resin mixtures . . . . .	185	Melting department costs . . . . .	523																																																																																																
Hot strength vs squeeze pressure in molding . . . . .	497	Melting furnace atmosphere, Effects of, on casting properties and annealability of malleable iron . . . . .	107-130																																																																																																
Hot tearing:		Melting gray iron . . . . .	48-51																																																																																																
Analogy of mechanics of . . . . .	181	Melting operations, Air pollution equipment for . . . . .	467-478																																																																																																
film stage concept . . . . .	180	Melting practice, Effect of, on macro-gas porosity in 85-5-5 bronze . . . . .	328																																																																																																
Influence of molding materials on . . . . .	167-183	Melting, Refractories for indirect-arc electric furnaces for non-ferrous . . . . .	733-743																																																																																																
of malleable iron . . . . .	115-119, 128	Metal flow in gating systems, Velocities and volume rates of . . . . .	439-450																																																																																																
Strain theory of . . . . .	181	Metallurgical bases for a titanium castings industry . . . . .	678-685																																																																																																
		Metallurgy of cast iron . . . . .	3, 658																																																																																																
Incentive, Basis for supervisory . . . . .	562	Metallurgy of shell cast magnesium . . . . .	187																																																																																																
Indirect labor . . . . .	459	Metallurgy and shell molding . . . . .	18, 19																																																																																																
Procedure for applying indirect . . . . .	562	Methods, Efficient, of production of machine tool castings . . . . .	29-51																																																																																																
system, Effect of good . . . . .	457	Methods engineering increases efficiency . . . . .	5																																																																																																
Wage, for cost and production control for indirect operators . . . . .	561-569	Micro-chemistry in the foundry industry . . . . .	4																																																																																																
Indirect-arc electric furnaces, Refractories for, for non-ferrous melting . . . . .	733-743	Microstructure of cast titanium-carbon alloys . . . . .	413-414																																																																																																
Indirect labor incentives . . . . .	459	Microstructure of centrifugally-cast tubes . . . . .	709																																																																																																
Indirect work defined . . . . .	561	Microstructure of nodular iron . . . . .	424																																																																																																
Induced flow process of baking oil-bonded cores . . . . .	279-290	Mold closing in shell molding . . . . .	15																																																																																																
Induction furnace, gas-atmosphere, for melting titanium . . . . .	540	Mold coating, Effect of, on macro-gas porosity in 85-5-5 . . . . .	335																																																																																																
Induction heated ductile iron, Hardening characteristics of . . . . .	422-431	Mold for titanium casting . . . . .	589																																																																																																
Inhibitor evaluation (for shell molds) . . . . .	185	Mold materials, Evaluation of, for titanium castings . . . . .	540-545																																																																																																
Insulating an acid electric furnace roof, Advantages of . . . . .	593-594	Mold materials for titanium casting . . . . .	679																																																																																																
Insulators, Effect of . . . . .	688	Mold variables . . . . .	615																																																																																																
Internal stresses, Nature of . . . . .	647	Mold department costs . . . . .	524																																																																																																
Investment, Agar gels in plaster-bonded . . . . .	347-351	Mold materials, Influence of, on hot tearing . . . . .	167-183																																																																																																
Isothermal transformation . . . . .	423, 654	Molding mixture for shell molding, Tests for . . . . .	166, 370-374																																																																																																
		Molding, Multiple, in a malleable shop . . . . .	628-633																																																																																																
<b>J</b>		Molding sand, Deformation of green . . . . .	159-165																																																																																																
Jobbing foundries, A simplified cost system for small . . . . .	600-602	Molding sand mixtures for non-ferrous casting . . . . .	436-437																																																																																																
		Molding sands, Non-ferrous . . . . .	432-438																																																																																																
<b>L</b>		Molding sands, Ramming of . . . . .	490-501																																																																																																
Lining, Gun placed silica cupola . . . . .	378-386	Molding standards, Conveyor . . . . .	263-271																																																																																																
Low-sulphur gray iron . . . . .	3	Molds, plugs and stool inserts . . . . .	640																																																																																																
Lucite, Preparation of . . . . .	94	Molten metals, Fluidity testing of . . . . .	399-410																																																																																																
		Monolithic patches for cupola . . . . .	384																																																																																																
<b>M</b>		Mottling tendency in malleable iron and furnace atmosphere . . . . .	112, 127																																																																																																
Machinability, Annealing iron castings for . . . . .	651-653	Mullite-type refractories . . . . .	735																																																																																																
Machinability of gray iron, Annealing for . . . . .	5	Multiple molding in a malleable shop . . . . .	628-633																																																																																																
Machine tool castings, Efficient methods of production of . . . . .	29-51																																																																																																		
Macro-gas porosity in 85-5-5 bronze . . . . .	327-346	<b>N</b>																																																																																																	
Magnesium alloy permanent mold and semi-permanent mold castings . . . . .	502-509	Natural sands . . . . .	433	Magnesium casting alloy ZK61:		Nickel alloy castings, Properties of graphitic . . . . .	552-560	Characteristics of high strength . . . . .	719-728	Nodular iron:		Effect of rare earth additions on . . . . .	723	in basic cupola . . . . .	55	Foundry characteristics of . . . . .	726	Research in . . . . .	3	Heat treatment of . . . . .	721	Noise:		Magnesium, Casting, in shell molds . . . . .	184-190	effects on work and efficiency . . . . .	695	Magnesium, Effects of, on eutectic modification and graphitization of certain Fe-C alloys . . . . .	674-677	Foundry, and its control . . . . .	694-700	Magnesium sand casting alloys containing thorium . . . . .	315-326	levels, Permissible . . . . .	695	Magnesium, shell cast, Metallurgy of . . . . .	187	Non-ferrous:		Malleable, Heavy-section . . . . .	3	casting, Molding sand mixtures for . . . . .	436, 437	Malleable iron:		melting, Refractories for indirect-arc electric furnaces for . . . . .	733-743	Annealability of . . . . .	119-128	metals, Centrifugal casting of . . . . .	711	Cause of pearlitic rim in . . . . .	299	molding sands . . . . .	432-438	industry, Graphitization in . . . . .	228-242			Effects of melting furnace atmosphere on casting properties and annealability of . . . . .	107-130	<b>O</b>		Hot tearing of . . . . .	115-119, 128	Oil-bonded cores, Induced flow process of baking . . . . .	279-290	Influence of furnace atmosphere on annealing of . . . . .	291-301	"One-purpose sand," Feasibility of . . . . .	434	Manganese content in . . . . .	111			Pearlitic, Development of . . . . .	3	<b>P</b>		Silicon content in . . . . .	110	Parting agents used in shell molding, Evaluation of . . . . .	9	Malleable shop, Multiple molding in a . . . . .	628-633	Pattern coating:		Malleabilizing heat treatment . . . . .	120	Guide to choosing . . . . .	585			Research in, produces quality castings . . . . .	580-586			Pattern design . . . . .	58, 99
Natural sands . . . . .	433																																																																																																		
Magnesium casting alloy ZK61:		Nickel alloy castings, Properties of graphitic . . . . .	552-560	Characteristics of high strength . . . . .	719-728	Nodular iron:		Effect of rare earth additions on . . . . .	723	in basic cupola . . . . .	55	Foundry characteristics of . . . . .	726	Research in . . . . .	3	Heat treatment of . . . . .	721	Noise:		Magnesium, Casting, in shell molds . . . . .	184-190	effects on work and efficiency . . . . .	695	Magnesium, Effects of, on eutectic modification and graphitization of certain Fe-C alloys . . . . .	674-677	Foundry, and its control . . . . .	694-700	Magnesium sand casting alloys containing thorium . . . . .	315-326	levels, Permissible . . . . .	695	Magnesium, shell cast, Metallurgy of . . . . .	187	Non-ferrous:		Malleable, Heavy-section . . . . .	3	casting, Molding sand mixtures for . . . . .	436, 437	Malleable iron:		melting, Refractories for indirect-arc electric furnaces for . . . . .	733-743	Annealability of . . . . .	119-128	metals, Centrifugal casting of . . . . .	711	Cause of pearlitic rim in . . . . .	299	molding sands . . . . .	432-438	industry, Graphitization in . . . . .	228-242			Effects of melting furnace atmosphere on casting properties and annealability of . . . . .	107-130	<b>O</b>		Hot tearing of . . . . .	115-119, 128	Oil-bonded cores, Induced flow process of baking . . . . .	279-290	Influence of furnace atmosphere on annealing of . . . . .	291-301	"One-purpose sand," Feasibility of . . . . .	434	Manganese content in . . . . .	111			Pearlitic, Development of . . . . .	3	<b>P</b>		Silicon content in . . . . .	110	Parting agents used in shell molding, Evaluation of . . . . .	9	Malleable shop, Multiple molding in a . . . . .	628-633	Pattern coating:		Malleabilizing heat treatment . . . . .	120	Guide to choosing . . . . .	585			Research in, produces quality castings . . . . .	580-586			Pattern design . . . . .	58, 99				
Nickel alloy castings, Properties of graphitic . . . . .	552-560																																																																																																		
Characteristics of high strength . . . . .	719-728	Nodular iron:		Effect of rare earth additions on . . . . .	723	in basic cupola . . . . .	55	Foundry characteristics of . . . . .	726	Research in . . . . .	3	Heat treatment of . . . . .	721	Noise:		Magnesium, Casting, in shell molds . . . . .	184-190	effects on work and efficiency . . . . .	695	Magnesium, Effects of, on eutectic modification and graphitization of certain Fe-C alloys . . . . .	674-677	Foundry, and its control . . . . .	694-700	Magnesium sand casting alloys containing thorium . . . . .	315-326	levels, Permissible . . . . .	695	Magnesium, shell cast, Metallurgy of . . . . .	187	Non-ferrous:		Malleable, Heavy-section . . . . .	3	casting, Molding sand mixtures for . . . . .	436, 437	Malleable iron:		melting, Refractories for indirect-arc electric furnaces for . . . . .	733-743	Annealability of . . . . .	119-128	metals, Centrifugal casting of . . . . .	711	Cause of pearlitic rim in . . . . .	299	molding sands . . . . .	432-438	industry, Graphitization in . . . . .	228-242			Effects of melting furnace atmosphere on casting properties and annealability of . . . . .	107-130	<b>O</b>		Hot tearing of . . . . .	115-119, 128	Oil-bonded cores, Induced flow process of baking . . . . .	279-290	Influence of furnace atmosphere on annealing of . . . . .	291-301	"One-purpose sand," Feasibility of . . . . .	434	Manganese content in . . . . .	111			Pearlitic, Development of . . . . .	3	<b>P</b>		Silicon content in . . . . .	110	Parting agents used in shell molding, Evaluation of . . . . .	9	Malleable shop, Multiple molding in a . . . . .	628-633	Pattern coating:		Malleabilizing heat treatment . . . . .	120	Guide to choosing . . . . .	585			Research in, produces quality castings . . . . .	580-586			Pattern design . . . . .	58, 99								
Nodular iron:

Refractory lining, Zircon as a . . . . .	739
Refractory linings, new, Drying . . . . .	738
Refractory maintenance in basic cupola operation . . . . .	54
Refractory selection factors . . . . .	733
Relaxation allowances . . . . .	357
Resin properties and characteristics . . . . .	369
Resins and sands for shell molding . . . . .	367-377
Resins, Evaluation of, for shell molding . . . . .	8

Resins, Phenolic, in shell molding process . . . . .	1
Resins, sand-conditioning, Function of . . . . .	1
Resins used in shell molding . . . . .	8
Retained strength vs squeeze pressure in molding . . . . .	498
Riemann temperature, Computation and significance of . . . . .	147
Riser adequacy and feeding range . . . . .	61-80
Riser behavior, Fundamentals of . . . . .	688-693
Riser dimensioning . . . . .	66
Riser equation . . . . .	687
Riser, Function of . . . . .	61, 133
Risering of gray iron castings . . . . .	131-141
Risers, Top-blind, on steel castings . . . . .	687, 688
Rockwell hardness test . . . . .	659

## S

Safety, Plant, in shell molding . . . . .	18
Safety program, Positive benefits of a . . . . .	570-573
Sand coating characteristics . . . . .	198
Sand control . . . . .	39-41
Sand flowability: Effect of, on casting surface finish . . . . .	156
Sand for shell molding . . . . .	574-579
Sand mixture, All purpose . . . . .	376
Sand mixture, Factors involved in making a . . . . .	197
Sand, reclaimed, green properties of . . . . .	309-314
Sand, reclaimed, Surface of . . . . .	215
Sand reclamation: A wet method of . . . . .	215
Dry, of molding sand for steel castings . . . . .	206-210
Fundamental concept of . . . . .	205
in a steel foundry . . . . .	192
with the combination system . . . . .	211-221
Sand reconditioning . . . . .	222-227
Sand-resin mixtures, Tests for . . . . .	193
Sand toughness, STN . . . . .	184
Sands and resins for shell molding . . . . .	163
Sands, Non-ferrous molding . . . . .	367-377
Sand, Ramming of molding . . . . .	432-438
Sands, steel, Properties of, at elevated temperatures . . . . .	490-501
Scabbing tendency of sand mixtures . . . . .	96-106
Sclerometer hardness test . . . . .	104
Sections, Feeding range of joined . . . . .	659
Segregation in bronze, A study of, using a radioactive technique . . . . .	302-308
Segregation of non-metallics in centrifugal casting . . . . .	352-354
Semi-centrifugal casting . . . . .	708
Semi-centrifugal casting defined . . . . .	715
Semi-permanent and permanent mold castings, Magnesium alloy . . . . .	702
Semi-synthetic sands . . . . .	502-509
Shell cast magnesium, Metallurgy of . . . . .	433
Shell core breakdown evaluation . . . . .	187
Shell molding: Applications and economics of . . . . .	187
binders, Control tests for . . . . .	23
Comparison of mechanical properties . . . . .	368
Cores in . . . . .	21, 22
Dimensional tolerance in . . . . .	15, 16
Effect of base sand in . . . . .	14
Effect of curing time in . . . . .	21
Effect of shell thickness in . . . . .	20
Equipment for . . . . .	19
Evaluation of resins for . . . . .	9
Gating and heading for . . . . .	8
materials testing . . . . .	12-14
Mechanics of . . . . .	166
Mechanization in . . . . .	9
Method of casting production . . . . .	16, 17
Mold closing in . . . . .	7-28
Parting agents used in . . . . .	15
Pattern equipment for . . . . .	9
Plant safety in . . . . .	11-12, 595-599, 729-730
process . . . . .	18
Raw materials used in . . . . .	1-3
Resin-sand blending for . . . . .	8
Resins and sands for . . . . .	11
Shell molds, Casting magnesium alloys in . . . . .	367-377
Shell molds, Permeability of . . . . .	184-190
Shell thickness, Effect of, in shell molding . . . . .	14
Shellac as a pattern coating . . . . .	19
Shellac as a pattern coating . . . . .	580

Silica flour, Use of, in shell molding . . . . .	8
Silicon carbide, Use of, in molding . . . . .	436
Silicon content in malleable iron . . . . .	110
Silicone as a parting agent in shell molding . . . . .	9
Sillimanite-type refractories . . . . .	735
"Skull" melting of titanium . . . . .	678
Slag basicity in basic cupola operation . . . . .	55
Slag composition and appearance in basic cupola operation . . . . .	56
Slag control . . . . .	379
Slag fluidity, Some causes and effects . . . . .	534
Solidification:	
at corner and core positions . . . . .	451-456
curves explain feeding . . . . .	610
factors related to risering . . . . .	610
of cylinders . . . . .	142-149
of steel . . . . .	62
time of castings . . . . .	611
Spalling of refractories . . . . .	734
Sprue design for centrifugal casting . . . . .	746
Sprue designs in vertical gating permanent molds . . . . .	82
Sprue-runner systems . . . . .	441
Sprue size, Effect of, on turbulence . . . . .	91
Straight sprues, Aspiration of air in . . . . .	91
Standard data tables for core finishing . . . . .	355-366
Standards, Conveyor molding . . . . .	263-271
Standards, Use of, in controlling costs . . . . .	457-466
Steel castings, Dry reclamation of molding sand for . . . . .	200-205
Steel foundry, Sand reclamation in a . . . . .	211-221
Steel sands, Properties of, at elevated temperatures . . . . .	96-106
Steel, Solidification of . . . . .	62
Strain theory of hot tearing . . . . .	181
Stress due to uneven cooling . . . . .	651
Stress in chilled structure . . . . .	651
Stress relief annealing of gray iron . . . . .	5
Stress relief heat treatment of gray cast iron . . . . .	646-650
Stresses, internal, Nature of . . . . .	647
Stress-strain and expansion tests on sand mixtures . . . . .	96
Strickle setting in pit mold . . . . .	42
Superheat, Effect of . . . . .	689
Surface finish, Effect of sand flowability on casting . . . . .	574-579
Surface of reclaimed sand . . . . .	215
Surface smoothness of permanent mold magnesium castings . . . . .	505
Synthetic sands . . . . .	432
T	
Temperature measurement . . . . .	407
Temperature, Method of measuring . . . . .	481
Tempering process . . . . .	644
Thermal methods of sand reclamation . . . . .	193, 194
Thermal studies . . . . .	441
Thermodynamics in core drying . . . . .	280
Thermodynamics of chemical reactions . . . . .	112
Thorium, Magnesium sand casting containing . . . . .	315-326
U	
Urea-formaldehyde resin used in shell molding . . . . .	8, 9
V	
Veining tendencies of cores . . . . .	150-155
Velocities and volume rates of metal flow in gating systems . . . . .	439-450
Venting centrifugal casting molds . . . . .	752
Vertical gating . . . . .	81-95
W	
Wage incentive for cost and production control for indirect operators . . . . .	561-569
Water-cooled basic cupolas . . . . .	58, 59
Watertown process of centrifugal casting . . . . .	703
Wear tests . . . . .	559
Wet method of sand reclamation . . . . .	194, 206-210
White iron structure . . . . .	124
Windsor Lock molding sand . . . . .	435
Wood flour or cellulose materials, Use of, in molding . . . . .	436
Work analysis . . . . .	356
Work units defined . . . . .	562
X	
X-ray unit, Flash . . . . .	441
Z	
Zinc, Effect of, on magnesium alloy ZK61 . . . . .	721
Zircon as a refractory lining . . . . .	739
Zircon flour, Use of, in shell molding . . . . .	8
Zirconium, Effect of, on magnesium alloy ZK61 . . . . .	719
